

# ACME BALL BEARING JACKS

GREATEST LIFTING POWER WITH LEAST LABOR AND TIME.

For Machine Shops, Builders, Railroad Trains, Railroad Shops, Contractors, House Movers and Manufacturing Establishments. OTHER SIZES FOR LIFTING AUTOMOBILES AND WAGONS.

The Ball Bearings and Automatic Oiler reduce friction to a minimum and increase the power and life of the Jack. Mechanism is so simple anyone can work it. Weight rests entirely and evenly on the balls. The Jack is constructed with an automatic brake and cannot run down or drop a load. This feature of the Jack places the handling of a load always under the control of operator. All parts are standard and interchangeable and the cost of maintenance light. By embodiment of mechanical principles with our quick-action ratchet and short lever the Jack can be used in closest quarters, thereby insuring the lifting of the weight in any place under which the head of the Jack can be put.
